EXPERIENCE

Palo Alto Networks | Santa Clara, CA
Senior Software Engineer, Frontend | Aug 2021 – Present

- Led 5 frontend engineers as UI lead for ADEM, Palo Alto Networks' experience monitoring platform, shipping 10+ React/TypeScript features (D3 root-cause views, AG Grid impact tables) that cut troubleshooting from 3 days to 30 minutes and lifted engagement 50% after GA.
- Built AI copilot interfaces for Strata Copilot, Palo Alto Networks' LLM assistant: schema-driven D3 charts that render AI-generated results, reusable sunburst and topology components for AI Canvas, and live UI state fed into prompts for device-aware answers.
- Saved a $4M enterprise deal from a competitor by extending ADEM's Zoom and Teams call analytics to WebRTC in 5 weeks, shipping the latency, jitter, and packet-loss dashboards that won the evaluation.
- Contributed WCAG-accessible components (e.g. Timeline) to the design system with Storybook docs, ARIA labels, keyboard and screen-reader support, and dark/light theming, adopted by 10+ teams.
- Rebuilt a 20,000+ line JSON-configured legacy UI as typed React/TypeScript micro-frontends on a shared component library with code splitting and lazy loading, halving development time and raising Jest coverage from 30% to 85%.
- Cut load times 80% on 100,000+ row AG Grid tables by moving sorting, filtering, pagination, and export server-side, and replaced a static Figma picker with server-side search across 50,000+ applications.
- Cut API traffic 60% by replacing per-widget polling with a shared RTK Query cache that deduplicates requests and tunes polling per view, keeping dashboards responsive at 100,000+ monitored devices.
- Owned product and UX for Access Analyzer with no dedicated PM or designer, leading 2 engineers to ship 5 features to GA by building on the design system and demoing prototypes for sign-off.
- Rolled out a platform-wide tenant selector and RBAC navigation with SSO across 10 micro-frontend teams in 3 weeks with zero major regressions, coordinating each team's adoption and deployment timeline.
- Halved QA cycles (4 weeks to 1-2) with shift-left testing: 400+ Playwright E2E tests, 200+ failing tests fixed to a 100% pass rate, Vitest coverage up 25% in a quarter, and CI/CD gates on every merge request.

Palo Alto Networks | Santa Clara, CA
Software Engineer Intern, Prisma Access | May 2020 – Aug 2020

- Built a full-stack customer feedback service for GlobalProtect: Python (Flask) and C#/.NET APIs on a self-designed MySQL schema, plus the web UI.
- Applied machine learning to 1,000+ customer reviews, delivering analytics that guided GlobalProtect functionality and UI/UX improvements.

PATENT & INNOVATION

Providing Identity Protection U.S. Patent Application
U.S. Patent Number 12,294,605 | Published June 19, 2025 | patents.google.com/patent/US20250202925A1

- Co-invented identity-protection technology that helps prevent financial fraud, identity theft, and enterprise breaches by detecting exploitable personal information and triggering proactive security safeguards.

EDUCATION

California State University, Long Beach (CSULB) | Long Beach, CA
B.S. Computer Science, GPA 3.65/4.0, President's Honor List | May 2021

SKILLS

Languages: TypeScript, JavaScript, HTML, CSS, SQL, Python, Java, C#
Frontend: React, Redux Toolkit (RTK Query), TailwindCSS, Material UI, AG Grid, D3, Highcharts, Mapbox
Practices: WCAG accessibility, design systems, responsive UI, micro-frontends, performance, REST APIs
Testing & tools: Playwright, Jest, Vitest, Cypress, Storybook, Git, CI/CD, GCP, Sentry, Datadog, Figma, Pendo
AI: LLM interfaces, Cursor, Claude Code, Windsurf

Hobbies & Interests: 1600+ day streak in Duolingo, Tactical Video Games, Skiing, Tacos
